

# EasyMatch QC (EZMQC) Automatically Closing

---

I believe what is happening to your software is that a default option is logging out of the EZMQC when idle. To turn this feature off please go to Options/System Configuration/Data Storage in this new window at the bottom is an option to "Auto Log Off EasyMatchQC when idle for". Please uncheck this option and click OK to save your changes. The software should now remain open until you close it.
