

Question: I have tried to import QTX formatted data and found that if no instrument is currently connected to EasyMatchQC there is no data displayed. As soon as I connect to a sensor the data comes out. Why?

Answer:

An instrument must be connected so that EasyMatchQC knows which wavelength range and interval to use. (e.g. 400-700 @ 10, 360-780 @ 10, 350-1050 @ 5) Once the range and interval are known then the import can begin.
