

Why are 2 AC power cords shipped with the D25 NC?

FAQ: "Why are there 2 AC power cords shipped with the D25 NC?"

The power supply on all current systems is a universal power supply that will automatically match to the line input in a range from 90 volts to 230 volts. The only difference between a 110V and 220V system is the plug end inserted into electrical wall outlet. To further ensure that the D25 NC is compatible in HunterLab markets throughout the world, both 110v and 220v cords are shipped with all D25 NC systems.
